Abstract of **WO 9835680 (A1)**

The invention essentially proposes a medicinal treatment consisting in potentiated morphine, produced by means of the repeated and successive dilution and agitation, using a homeopathic method, of the original morphine-based substance (a mixture of opium alkaloids containing 50-95 wt.% morphine, morphine hydrochloride, and apomorphine or other morphine derivatives). The method prescribes, particularly during periods characterized by manifestations of critical intoxication and abstinence, the combined administration of potentiated morphine and an additional potentiated remedy derived by means of a homeopathic methods from the original habitual narcotic substance for which the patient has a pathological weakness.
